

ABSTRACT

A method for manufacturing a honeycomb formed body,  
which comprises: a mixing step of mixing two or more types  
5 of aggregate particulate materials (first mixing) to  
prepare a forming blend (dry powder) and then mixing the  
blend with water (second mixing) to prepare a forming blend  
(wet powder); and a kneading step of kneading the forming  
blend (wet powder) to prepare a clay. This method for  
10 manufacturing a honeycomb formed body allows the prevention  
of the generation of internal defects without the adoption  
of a complicated process or a troublesome operation, with  
ease and simplicity.
